STILL & SPARKLING SYSTEM

Ravello & Ravello-Hot

Compact Countertop Sparkling Water Dispenser

Are you looking to have an unlimited supply of still and sparkling water on tap at your home? Tired of buying bottled water or having concerns about contaminants in your drinking water supply?

The Ravello & Ravello-Hot offer a never-ending stream of filtered water for your home or small office. With its incredibly compact dimensions, the Ravello fits harmoniously into any environment, offering all the water you need and satisfying your hydration needs elegantly and practically.

Features and Benefits

- ✔ Unlimited supply of filtered waters on demand dispensed from a compact countertop appliance. Available in a white and black finish with an option for hot water (Ravello-Hot).
- ✔ **Ravello** is offered in a white finish and can dispense Chilled Still, Chilled Sparkling, Slightly Sparkling and Ambient filtered water.
- ✔ **Ravello-Hot** is offered in a black finish and can dispense Chilled Still, Chilled Sparkling, Ambient & Hot filtered water up to 185 degrees.

Enjoy chilled still & sparkling water on demand at home or in office.

Sparkling Water At Home

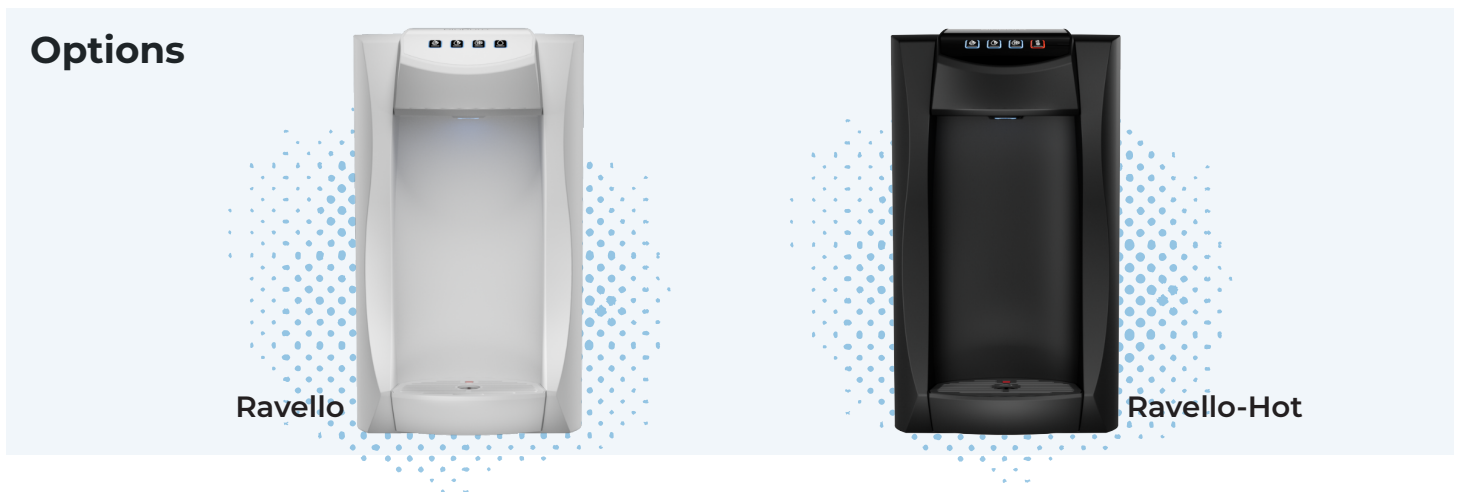

There are many reasons to have a chilling and carbonation system at home or in the office, but the leading reason is simple - pure water on demand. A true countertop appliance, the Ravello serves as a compact bottled water factory, supplying an array of filtered water types through a versatile and compact appliance. Say goodbye to buying bottled water or making frequent grocery store visits!

Reusable Bottles

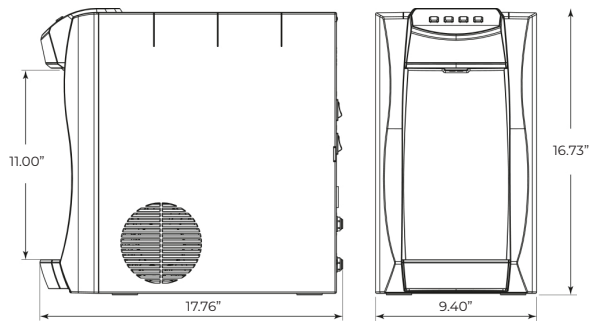

Each Ravello system comes complete with Bluedrop's sparkling water filtration system, installation kit and elegant dishwasher-safe 1 Liter Bluedrop glass bottles.

How Cold Carbonation Works

Soda water is an example of high pressure "ambient carbonation" which is commonly dispensed from a soda gun. The large exploding bubbles are suitable for soda but not desirable for drinking. Bluedrop sparkling water is made using cold carbonation technology involving a precise mixture of cold water and co2 pressure creating a long-lasting bubble and Italian sparkling water mouthfeel.
