- ✔ The user interface is equipped with a modern touch display for selecting the type of water to be dispensed and a dispensing spout with adjustable vertical movement based on the size of the cup or container used.

Enjoy chilled still & sparkling water on demand at your office.

Sparkling Water At Your Office

There are many reasons to have a chilling and carbonation system at in the office, but the leading reason is simple - pure water on demand. A true countertop appliance, the Modena serves as a compact bottled water factory, supplying an array of filtered water types through a versatile and compact appliance. Say goodbye to buying bottled water or making frequent grocery store visits!

Hygiene & Safety

The protected internal taps guarantee greater hygiene, reducing the risk of contamination. The integrated safety valve prevents any water leakage due to internal faults, ensuring safe operation in all conditions.

How Cold Carbonation Works

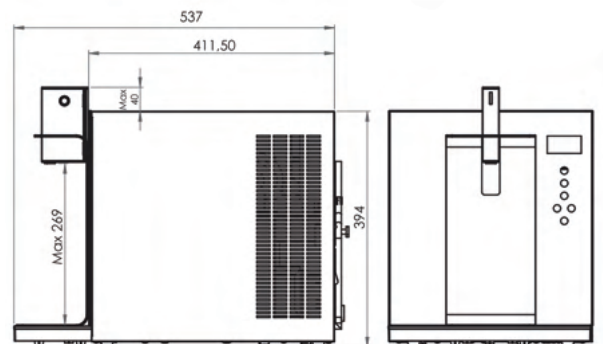

Soda water is an example of high pressure “ambient carbonation” which is commonly dispensed from a soda gun. The large exploding bubbles are suitable for soda but not desirable for drinking. Bluedrop sparkling water is made using cold carbonation technology involving a precise mixture of cold water and CO₂ pressure creating a long-lasting bubble and Italian sparkling water mouthfeel.

The Bluedrop Modena 45

The Modena 45 is a countertop water dispenser with ice bank technology designed specifically for medium sized offices. It can dispense up to 45 liters per hour of cold water (still and sparkling) and 8 liters per hour of hot water (Modena 45-Hot models). It includes a professional carbonation device, a stainless steel hot water tank, and a high-tech control panel with a touch screen.
